

MOULDING | MOULDINGS THAT MAKE A STATEMENT

Millwork 360 specializes in creating bold, beautiful mouldings that are tailored to each customer's specific needs. Millwork 360's mouldings range in size from under an inch to 12 inches wide, and they are carefully customized to fulfill any base, crown, chair rail, handrail, landing tread or plinth block projects.

MILLWORK 360: THE DEGREE OF SUPERIOR QUALITY

We have over 5,000 moulding profiles in stock, which are available in over 30 different species of wood.

Scanned with state-of-the-art equipment, our custom mouldings are 99 percent defect-free and manufactured with minimal waste.

In addition to our wide variety of profiles, we're able to create any custom profile to help design unique spaces.

All rough lumber used in manufacturing is inspected and evaluated by an NHLA-certified Lumber Grader on staff.

There's essentially zero waste. All lumber that does not meet quality standards is re-manufactured into finger joint door cores, while remaining scrap is ground into horse bedding for local horse farms.

We're AWI Quality Certified for Premium Grade Mouldings to meet QCP specified project needs.

HAVE A CUSTOM MOULDING PROJECT IN MIND?

Let Millwork 360 help you turn your vision into a reality.
