

Mastergrain Fiberglass Door Finishing and Maintenance

Maintenance for Your Beautiful New Door

The finish we use at Millwork 360 is the best in the market, but like anything precious it requires some TLC.

Please wash your door on a regular basis to combat dirt build up that can cause chalking or marring of the original finish. Be sure to use a mild detergent with lots of water to clean with a soft cloth. Rinsing in clean water then let air dry.

The finish on our doors are sensitive to sandpaper, steel wool and or harsh chemical cleaners and will damage easily. Not only that, if our doors have any harsh chemicals or signs of abrasion, it will void your warranty, and nobody wants that!

We've provided you with either a stain marker or a paint touch up bottle matched just for your door...for life's little mishaps. Small scratches can be touched easily with a bit of time and patience.

Whether staining or painting be sure the area is super clean and dry, don't do the touch up in direct sunlight, wait till a cloudy day if need be.

Stain and Paint Touch Up Instructions

- Be sure the door is clean and dry
- Shake the bottle well
- Using an Artist brush, apply only what is necessary to cover the scratch
- Gently dab where the scratch is and have a cotton swab and soft cloth to clean up the edges
- Let dry and do a second coat if required
- Blend with a dry brush if needed

Thank you from Team Millwork 360.

We are proud of our product and wish you many years of enjoyment with your beautiful new Mastergrain Door.

NOTE: The use of detergents containing greater than 0.5 phosphate; containing bleach; or any other fast degreaser products are not recommended. Do Not leave any cleaning solutions on the doors surface, always rinse with clean water.
